PERINE web resources on the theme
"Managing education"

Why "Managing education"?

- It is broad enough to cover the various aspects of the database
- This topic is always in focus of the audience
- It can demonstrate the different issues in the partner countries, and how can these be integrated in one database

The subtopics we wanted to collect

- System-level reform and restructuring at the national and regional levels, quality discussion, indicators, evaluation processes.
- The public and the private, self-administration, decentralization
- Developing educational institutions
- The management profession in education

Two ways of searching the database

1. Through the research themes
   More than 250 records
   Broad picture of educational management issues
2. Through European Education Thesaurus (EET)
   If you are looking for more specific information

The media types of information resources

• Databases, datasets
• Individual documents
• Document collections, bibliographies
• Event announcements
• Government publications
• Full text journals
• Mailing lists
• Web sites of organisations
• Projects
• Reference material
• Resource guides
• Frequently asked questions

Why is this collection useful for you?

• Using the multilingual thesaurus you get information in your own language, and information about foreign countries in English. So you are able to decide about the relevance of a resource written in a language you do not speak at all.

• In many cases the database link leads you directly to the resources, not only to the main web sites, catalogued are also parts of the web sites. (e.g. Swiss statistical records, individual documents)

• Since our focus is on the needs of the researchers, you can find important research projects. This type of information is very often hidden in other catalogues.

• The collection is selected, one main criteria of the selection is quality. You do not have to make this selection, if you use our catalogue.

• You can see the resources of 8 countries in one catalogue, and based on the same terminology compare them.

• Networking is made easier as access to important research projects and research networks is provided.
• Opening of records provides you at a glance with detailed information on creator, publisher, languages etc.
• The resources are regularly checked.
